

**For Immediate Release**

SCHROEDER INDUSTRIES INTRODUCES

**AntiStat Pleat Elements**

October 2012 | Leetsdale, PA

Leetsdale, PA - Schroeder Industries, a recognized leader in filtration and fluid conditioning products, introduces its AntiStat Pleat (ASP) Elements.

The AntiStat Pleat (ASP) Element was developed to greatly reduce or eliminate electrostatic discharge problems that can occur during filtration of hydraulic and lubrication fluids. By combining proven Excellement® media and ASP technology, it is now possible to offer both high filtration efficiency and either prevent or significantly reduce electrostatic discharge.

Schroeder's ASP Elements inhibit element damage and oil deterioration, decrease sludge and oil sediment and extend system component life.

**About Schroeder Industries**

Schroeder Industries, an ISO 9001: 2008 certified company, designs, manufactures and markets filtration products for the hydraulic and lubrication, filter systems and process and fuel industries. Their expertise in filtration technology, superior filter and element technology capabilities, dedication to customer service and product support are the reasons Schroeder is a worldwide leader in Advanced Fluid Conditioning Solutions™.
